

NATIONAL CYBERSECURITY LAW FOR VIT'S

A Comprehensive Legal Framework for
a Secure Digital Nation

- **Adithya Achary (24104B0036)**
- **Jayditya Jadhav (24104B0034)**

Why Does VIT's Need a Cybersecurity Law?

VIT's has become a highly digital nation with:

- 50 million internet users
- Online banking and e-commerce services
- Smart city infrastructure
- AI-driven public services
- Cloud-based businesses

As digital adoption grows, cyber threats have also increased significantly. A dedicated cybersecurity law is necessary to protect citizens, businesses, and national infrastructure from evolving cyber risks.

Current Cybersecurity Challenges

- Large-scale data breaches exposing sensitive information
- Ransomware attacks disrupting hospitals
- Online banking fraud and phishing scams
- Identity theft and account misuse
- Social media misinformation campaigns
- Cyberbullying and online harassment
- Threats against critical infrastructure

These incidents have highlighted the urgent need for stronger cybersecurity governance.

Objectives of the Cybersecurity Law

The law aims to:

- **Protect citizens' digital rights**
- **Strengthen national cyber defenses**
- **Reduce cybercrime incidents**
- **Secure critical infrastructure**
- **Improve incident reporting and response**
- **Promote cybersecurity awareness**
- **Support safe innovation in AI and emerging technologies**
- **Build trust in digital services**

Key Terms Covered:

- **Cybercrime**
- **Malware**
- **Ransomware**
- **Phishing**
- **Data Breach**
- **Identity Theft**

- **Artificial Intelligence**
- **Cloud Computing**
- **Digital Signature**
- **Critical Infrastructure**
- **Encryption**
- **Deepfake**

Citizens' Digital Rights

Right to Privacy

Protection against unauthorized data collection.

Right to Secure Data

Organizations must safeguard personal information.

Right to Data Deletion

Citizens can request removal of personal data.

Right to Information

Citizens can know how their data is collected and used.

Right to Report Cybercrime

Safe and accessible reporting mechanisms.

Right to Fair Investigation

Transparent and unbiased legal procedures.

Major Cyber Offenses

Crime	Punishment
Unauthorized Access	2-5 Years
Data Theft	3-7 Years
Identity Theft	2-6 Years
Phishing	1-4 Years
Ransomware	4-10 Years
Malware Distribution	2-5 Years
Cyberbullying	6-3 Years
Online Harassment	1-4 Years
Financial Fraud	3-8 Years
Website Defacement	1-3 Years
Misinformation	1-5 Years
Cyber Terrorism	10+ Years or Life Imprisonment

Data Protection Framework

The framework governs:

Data Collection

- Purpose-based collection
- User awareness and consent

Data Storage

- Encryption
- Access controls
- Regular audits

Data Sharing

- User consent required
- Secure third-party handling

Data Deletion

- Mandatory processing within 45 days

Data Breach Notification Process

Organizations must:

- Detect and document incidents immediately
- Report breaches to NCSA within 48 hours
- Notify affected users
- Describe impact and root cause
- Implement corrective actions

Failure to report may result in legal penalties.

Corporate Responsibilities

Organizations must:

- **Conduct security audits every 6 months**
- **Encrypt sensitive information**
- **Monitor networks continuously**
- **Maintain secure backups**
- **Train employees annually**
- **Appoint Data Protection Officers**
- **Implement role-based access controls**
- **Apply security patches promptly**

These measures promote accountability and resilience.

Government Responsibilities

The government will:

- **Protect critical infrastructure**
- **Monitor national cyber threats**
- **Investigate cybercrimes**
- **Coordinate internationally**
- **Conduct awareness campaigns**
- **Promote cybersecurity research**
- **Secure government digital systems**

Cyber Incident Reporting Framework

National Cyber Security Authority (NCSA)

Core Functions:

- **Threat monitoring**
- **Cybercrime investigation**
- **Regulatory compliance**
- **Incident response**
- **Public awareness**
- **Infrastructure protection**

Departments:

- **Cyber Threat Analysis**
 - **Critical Infrastructure Protection**
 - **Cyber Intelligence**
 - **Digital Investigation**
 - **Cyber Emergency Response**
- 

AI and Emerging Technology Regulations

Artificial Intelligence

- Security testing
- Ethical use of data
- Risk monitoring

Deepfakes

- Mandatory labeling
- Removal of harmful content

IoT Devices

- Security-by-design
- Regular updates

Cloud Computing

- Encryption
- Security assessments

Digital Identity Systems

- Multi-factor authentication
- Identity protection

Critical Infrastructure Protection

Banking

- MFA
- Real-time monitoring

Healthcare

- Secure patient records
- Access restrictions

Transportation

- Continuous monitoring
- Incident response plans

Energy Sector

- Protected industrial systems
- Backup and recovery mechanisms

Government Data Centers

- Encryption
- Vulnerability assessments

National Awareness & Education Campaign

Schools

Safe internet practices and cyberbullying awareness.

Colleges

Cybersecurity curriculum and competitions.

Corporates

Annual employee training.

Social Media

Public awareness campaigns and infographics.

Communities

Workshops and citizen engagement programs.

International Cooperation

VIT's will collaborate through:

- Joint cybercrime investigations
- Information-sharing agreements
- International cyber operations
- Extradition processes
- Threat intelligence exchange

Global cooperation strengthens national cybersecurity.

Future Recommendations & Conclusion

Future improvements include:

- AI governance and oversight
- Quantum-resistant cryptography
- Stronger privacy protections
- Secure digital identity frameworks
- Cyber warfare preparedness

Conclusion

The National Cybersecurity Law provides a comprehensive framework to protect citizens, organizations, and critical infrastructure while supporting innovation and digital growth. It establishes a safer, more resilient, and trustworthy digital future for VIT's.

THANK YOU
